

INDUSTRY SPECIFIC SOLUTIONS (Building sites commercial and domestic)

Theft and vandalism at build sites is a common issue facing a City and residents. Copper and material theft, supplies, tools, large equipment are common targets and cost this sector millions each year aside from the inconvenience, delays and higher insurances.

Our work in this sector has previously been site specific where Police and the City have identified serial incidents within a city from the same group of opportunistic offenders.

Our work has seen serial copper thieves, build material thieves and plant and equipment vandals caught live on site.

Our industry experience in the building sector helps us understand the needs of such clients, and our equipment design and tailoring for specific requirements is above comparison.

We have witnessed the loss and damage on heavy construction sites while working within this sector and appreciate that such breaches are not only from outsiders.

Our covert work allows these other offender types to discreetly be caught live on site with minimal interruption and maximum protection.

For this sector we welcome direct sale request, deployment requests short and long term and ongoing monitoring if that is your requirement.

We can provide the equipment, tailoring, site visits or design of tailored gear to fit your exact needs.

We have worked on and for many large sites which include the Courts precinct Melbourne, Federation Square and many others. We have an inside knowledge of such sites and the problems that are typical.
