

UPCOMING RELEASE – JAN 2014

GPS COVERT - TRAKTHEFT

THEFT OF PROPERTY FROM MOTOR VEHICLES

In January 2015 we will be releasing the new GPS traktheft unit.

We have been working on a small and accurate ability for City Police to be able to place in unlocked vehicles in prime locations this new option for tracking serial property theft offenders.

Traditional favourite items taken include tool boxes, tool kits, lap tops and bags.

The new unit will be embedded within the lap top, the tool kit, and other ideas so the offender has no knowledge the tracker is in place.

The unit will function in the following manner.

- Will be secreted into the item itself. Eg lap top, power drill, case or other.
- Left in an unlocked vehicle in plain view
- Will, upon movement send live gps coordinates and mapping to designated officers by live email every 30 seconds. Accuracy is 5-10'.
- Will last for approximately 3-5 days on one battery charge.

Designed for Police use only, we would suggest the use of the units is an operational one so that while in the area, the offender can be quickly detained to avoid signal loss going indoors.

The units would be placed in vehicles provided by the Police for the purpose of the job at hand.

Tailored hides can be created as required in most forms for use in special cases for building sites, theft from vehicles and other specific requirements.
