

THE WHOLE OF CITY / WHOLE OF NETWORK GRAFFITI SHUT DOWN

This process is a replication of the documented cases within our site. Although each City or Network has different situations and levels of damage, this program is tailored to fit each specific set of circumstances. The program has very specific components that are dependant on each other both from a timing and dependency perspective.

The programs fundamental elements cannot be changed or omitted as has been proven. The program sees a synergy between each aspect and the exciting results that your City and its Police hope for are almost immediate

The cost of such a program is quickly recovered as the first serial offenders are stopped and cease to cost damage your city.

The real cost of the all in program can be estimated at between 3% and 10% of your current annual removal costs.

The end cost of the program can be reduced or increased by equipment deployment numbers however it needs to be considered that the more sites that are covered "live", the faster and more complete the likely end results.

(Remember. What we provide you actually has a cost benefit within weeks of inception unlike treadmill removal programs)

- The full field audit. (As described in the previous audit only documentation)
- Full analysis, reporting and consults with Council and your Police re audit and post audit program.
- Deployment, movement of all equipment, (Purchased or included by us), on a week to week basis.
- Daily travel through City hot sites to establish offender movement and activity levels.
- 24 / 7 monitoring of all equipment to your Police or "000"
- Preparation of all designated equipment deployment sites at cost.
- Upon apprehensions provide all interview documentation and assistance in brief preparation.
- Full training and regular Police liaison works as required.
- Social media "exploration" to add links and associations between offenders.
- Sharing of all data between agencies on GRIP and of value to extended arrests. Eg rail, road, other cities.
- Establish and maintain retail and or warranted citizen network to report daily incidents to GRIP via app.
- Inclusion of 1000 or pre decided properly analysed and loaded incidents from removals or networks established.
- If a client purchases equipment and we deploy, we tend to match the equipment 1:1 to bolster and expedite the end results. As an example if a client purchases 4 tripwires as part of the package, we would tend to offer an added 4 units of our own to compliment and increase the end success.
- **Estimated reductions in costs and offender numbers can vary but we would suggest 30% -50 % as a base minimum.**

FLEXIBILITIES AND VARIABLES

It needs to be appreciated that each city is different in size, demographic, and offender types and their respective severity.

Our ability to work within your existing budget, your levels of attack and anticipated outcomes allow you to readily see an almost immediate cost and aesthetic benefit. Ultimately the program we operate is proven. The flexibilities in equipment numbers used, is one of the main items that will dictate the speed of the shut down and the returns the City wants and needs.

The period of time the program is in place is up to the client. They may be happy with the results gained after 6 months or elect to maintain a watered down program beyond the 6 – 12 month period.
